Send confirmation

Confirming the order updates its processing state. Order confirmation updates the processing state of both the order and its line items.

- An order in **Not acknowledged** transitions to **Confirmed without changes** or **Confirmed with changes**, depending on whether any information is modified during the confirmation step.
- Line items transition from **Stage: New** to **Stage: Confirmed** if no line-level actions are applied.

Line-level actions remain available during confirmation. This includes adjusting quantities, updating prices, and modifying other editable attributes before finalising the confirmation.
